

Shadow Mirror finish

Reflecting your elegant lifestyle, Samsung's Shadow Mirror finish adds sophisticated chic to any décor.

Hidden Display

Hidden behind the Vivace's attractive Shadow Mirror finish is an LED display. As soon as you switch on the airconditioner, the display lights up, informing you of the set temperature, operating mode etc.

Stylish dust-free front panel

Once in operation, the front panel of the Vivace tilts forward to take warm air in whilst cool air is expelled underneath. As a result of its smooth face, dust collection is minimised.

SAMSUNG VIVACE - ultimate elegance partnered with unrivalled technology

With Good'Sleep Mode, Silver Nano Health System, and world-first Micro Plasma Ion technology that creates a 'Zone of Health' around you, Vivace is today's top choice in room airconditioners

Samsung's Vivace cools, heats, filters and deodorises like conventional airconditioners. But what sets it truly apart from the herd is a trio of remarkable features. Firstly, its Good'Sleep Mode regulates room temperature to ensure a restful sleep.

Next, Samsung's Silver Nano Health System kills 99.9% of all germs passing through the airconditioner. And best of all, Vivace now has Micro Plasma Ion technology that releases active hydrogen atoms plus oxygen ions which bond with airborne viruses, allergens and bacteria, causing them to decompose harmlessly.

The result is a protective 'Zone of Health' in your home or office environment. When this level of world-beating technology is partnered with the elegance of Samsung's new 'Shadow Mirror' finish, the result is an airconditioner without equal in the marketplace today.

Vivace: your lifestyle choice.

Samsung's Micro Plasma ion device creates a strong 'purified zone' through generating hundreds of thousands of ions per minute.

Hydrogen ions bond with electrons and change into active hydrogen, while Oxygen in the air also bonds with electrons to form oxygen ions. Released into the air, these active hydrogen and oxygen ions then attach to viruses, bacteria and allergens, decomposing them and rendering them harmless.

Multi-step Air Purifying System

Multi-Step Air Purifying System with Micro Plasma Ion technology: a Samsung world-first that creates a 'Zone of Health' in your home or office environment.

Samsung led the world with its Silver Nano Health System that's proven to kill 99.9% of all germs passing through the airconditioner. Now the Vivace takes environmental health a giant step further with its Micro Plasma Ion technology.

Samsung's Micro Plasma Ion device generates active hydrogen atoms together with oxygen ions into the air. These then bond with airborne proteins such as viruses, bacteria, moulds and allergens, causing them to decompose into water. The effect of this cutting-edge technology is living-space that's transformed into a 'Micro Plasma Ion Zone', protecting the occupants from airborne infectious diseases such as influenza viruses, Staphylococcus Aureus and many other bacteria and allergens.

As a result, when you specify a Samsung Vivace, you won't simply be enjoying summer cooling and winter warmth. You'll be ensuring that a 'Zone of Health' surrounds you and your family all year through – the purest, healthiest air you'll ever breathe indoors!

What is the Good'Sleep Mode?

Developed from scientific studies of sleeping patterns, Samsung's Good'Sleep Mode ensures a better night's sleep through synchronising room temperature to your sleep pattern. When you set your Vivace airconditioner to Good'Sleep Mode, it cools the room quickly at first to ensure the right environment whilst falling asleep. Then during the course of the night, it gradually increases temperature slightly so you're not awakened by excessive coldness. At the same time, it also ensures the correct level of moisture to prevent your skin from drying out. Result: an excellent night's sleep, with a longer period of 'deep sleep' time.

3 benefits of Good'Sleep Mode

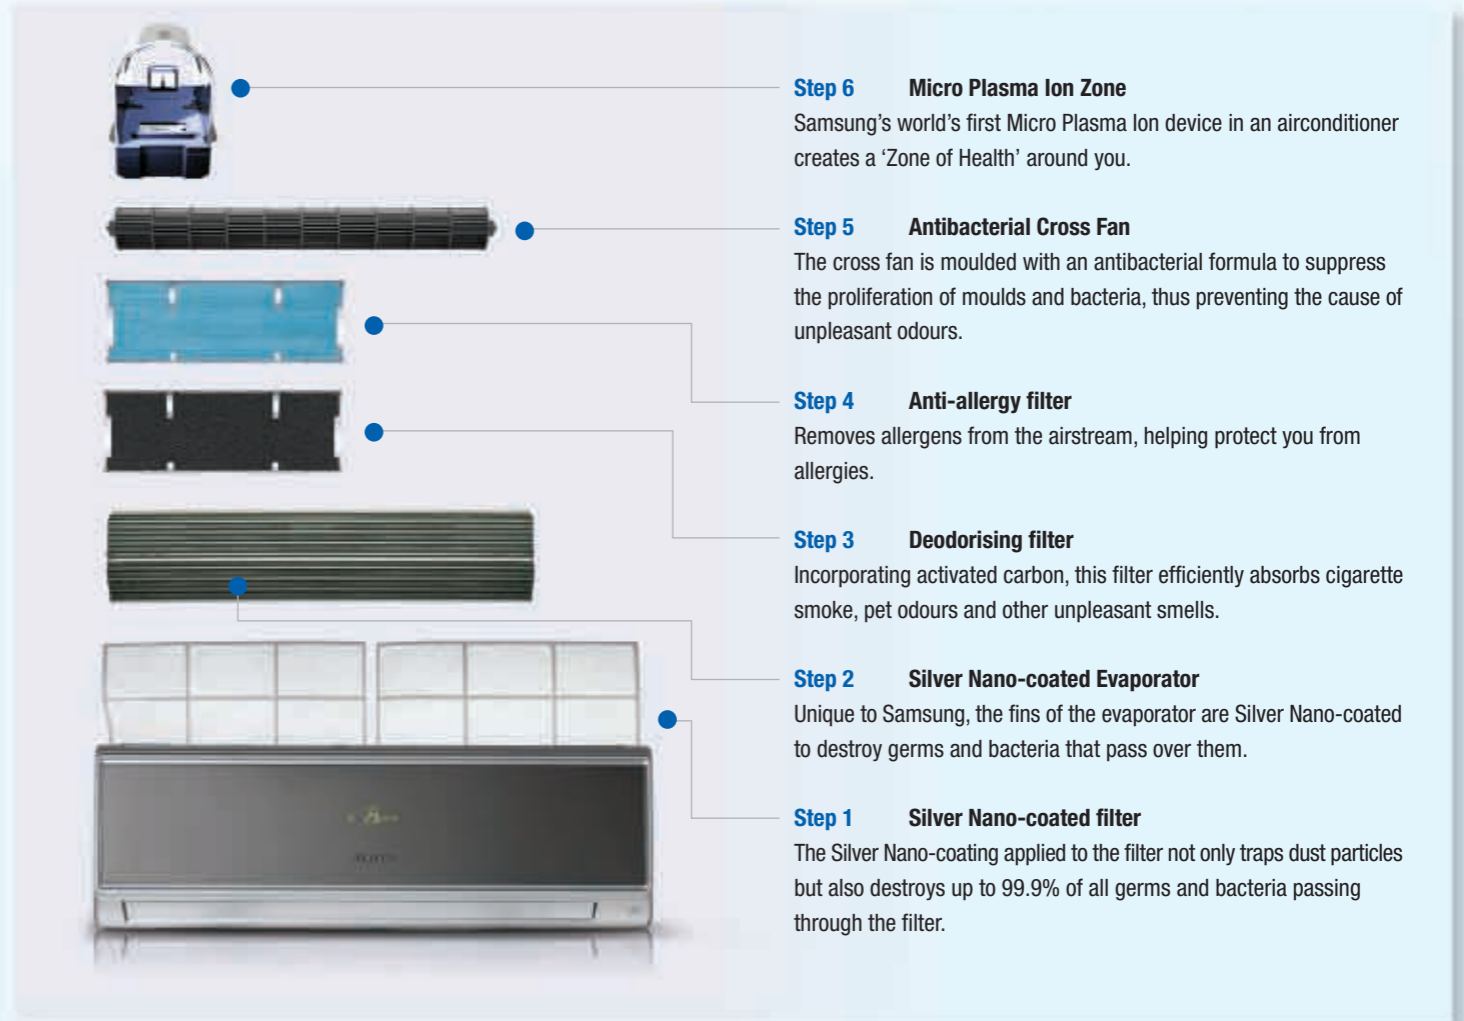

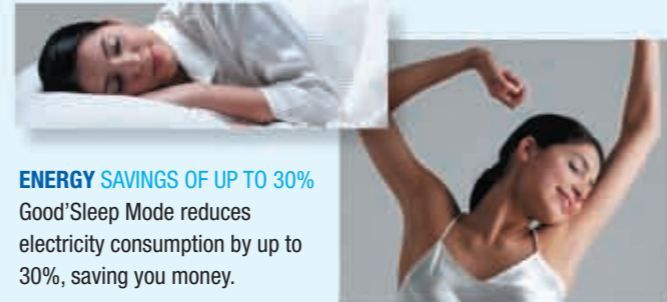

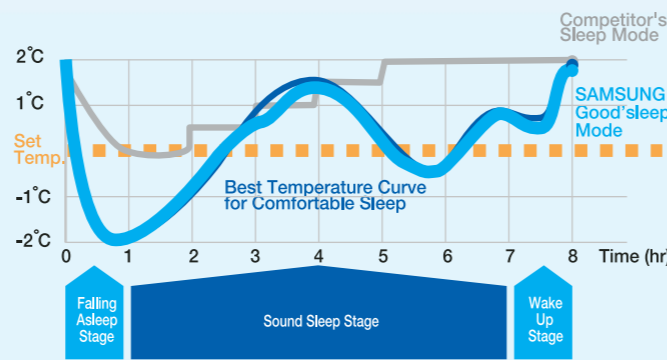

KEEPS OPTIMUM SKIN TEMPERATURE FOR SLEEPING

With optimum skin temperature being maintained during sleeping, you stay free from sleep disruptions caused by being too hot or too cold.

82% LONGER DEEP SLEEP HOURS

'Deep sleep hours' are when your body and brain are experiencing maximum rest. Good'Sleep Mode increases deep sleep by up to 82%, helping you fully recover your vitality.

- Step 6 Micro Plasma Ion Zone**
Samsung's world's first Micro Plasma Ion device in an airconditioner creates a 'Zone of Health' around you.
- Step 5 Antibacterial Cross Fan**
The cross fan is moulded with an antibacterial formula to suppress the proliferation of moulds and bacteria, thus preventing the cause of unpleasant odours.
- Step 4 Anti-allergy filter**
Removes allergens from the airstream, helping protect you from allergies.
- Step 3 Deodorising filter**
Incorporating activated carbon, this filter efficiently absorbs cigarette smoke, pet odours and other unpleasant smells.
- Step 2 Silver Nano-coated Evaporator**
Unique to Samsung, the fins of the evaporator are Silver Nano-coated to destroy germs and bacteria that pass over them.
- Step 1 Silver Nano-coated filter**
The Silver Nano-coating applied to the filter not only traps dust particles but also destroys up to 99.9% of all germs and bacteria passing through the filter.
